New histidine-proline rich glycoprotein (HPRG) polypeptide, useful for diagnosing or treating diseases associated with undesired cell migration, invasion, proliferation, or angiogenesis, e.g. cancer, atherosclerosis.

Claim 1; Page 13; 82pp; English

The present sequence is the protein sequence of the histidine-proline-rich (H/P) domain of rabbit anti-angiogenic histidine proline rich glycoprotein (HPRG, see also ABB79805). Claimed anti-angiogenic polypeptides or peptides comprise: the H/P domain (see ABB79806) of human HPRG; an H/P domain of rabbit HPRG; a variant of these that is capable of inhibiting angiogenesis, endothelial cell proliferation or endothelial tube formation in vitro or in vivo; or a pentapeptide having the generic sequence given in ABB79808. Also claimed are: chemically synthesised or recombinantly produced peptide multimers; a diagnostically or therapeutically labeled anti-angiogenic polypeptide, peptide

Thu Jun

the diagnostically labeled polypeptide, peptide or peptide multimer; an antibody specific for an epitope of HPRG that is present in the H/P domain of human or rabbit HPRG, and which binds to HPRG or to any of the domain, or an antigen-binding fragment of the antibody; a method for inhibiting cell migration, cell invasion, cell proliferation or angiogenesis, or for inducing apoptosis; a method for treating a subject having a disease or condition associated with undesired cell migration, invasion, proliferation, or angiogenesis; a method of midration, invasion, proliferation, or angiogenesis; a method of cetecting the presence of HPRG or its cleavage product or its peptide in a biological sample; isolated mucleic acids encoding the polypeptide, cetecting the presence of HPRG or its cleavage product or its peptide in a biological sample; isolated mucleic acids encoding the polypeptide, cetransfected cells; a method of providing to a cell, tissue or organ and angiogenesis-inhibitory amount of HPRG, an H/P domain of HPRG or its peptide or peptide multimer; an affinity ligand useful for angiogenesis-inhibitory amount of HPRG, an H/P domain of HPRG or its pentapeptide, or the peptide multimer; an affinity ligand useful for charageptide, or the peptide multimer; an affinity ligand useful for binding molecule, comprising the comprising or enriching cells (compositions and methods are useful in diagnosing or treating a disease or confition associated with undesired cell migration, invasion, compositions and methods are useful in diagnosing or treating a disease or confitient in the periode confitient and methods are useful in diagnosing or treating a disease or confitients. All produces and methods are useful in inhibiting the growth of primary criticatures. HPRG is especially useful in inhibiting the growth of primary criticatures is a large and methods are useful in inhibiting molecules. The criticopathy, inflaammation, endometricals, arthritis, attended are disease. comprising diseases like Alzheimer's or Parkinson's disease. The antibodies iogenesis and are useful for promoting in pertinent disease states, and in various stically useful HPRG-related composition, stimulators of ang neovascularization stimulators of multimer; a

The present sequence is the protein sequence of the histidine-prolinerich (II/P) Gonain of human anti-angiogenic histidine proline rich
cit (II/P) Gonain of human anti-angiogenic histidine proline rich
cycoprotein (HPRG, see also ABF99804). Claimed anti-angiogenic
cylyooprotein (HPRG, see ABB12818); a variant of these that is capable
of inhibiting angiogensels, endothalial cell proliferation or endothalial
tube formation in vitro or in vivo; or a pentapeptide having the generic
sequence given in ABB79808. Also claimed are: chemically synthesised or
recombinantly produced peptide multimers; a diagnostically wintro or in vivo; or a pentapeptide having the generic
sequence given in ABB79808. Also claimed are: chemically synthesised or
recombinantly produced peptide multimers; a diagnostically useful HPRG-related composition, comprising
the domains in a way which inhibits the anti-angiogenic activity of
HPRG or the domain, or an mitigen-binding fragment of the antibody; a
method for inhibiting cell migration, cell invasion, cell proliferation
cc of the domains in a way which inhibits the anti-angiogenic activity of
HPRG or Inhibiting cell migration, or angiogenesis; a method of
subject having a disease or condition associated with undesired cell
engration, invasion, proliferation, or angiogenesis; a method of
ctertung the presence of HPRG or its cleavage product or its peptide
migration, invasion, proliferation, or angiogenesis a method of
ctertung the presence of HPRG or its cleavage product or its peptide
a biological sample; isolated multimer; an expression vector; transfected cells; a method of
ctertung the peptide multimer; an expression vector; transfected cells; a method of
ctertung the peptide multimer; an expression or corpical migration, or angiogenesis, e New histidine-proline rich glycoprotein (HPRG) polypeptide, useful for diagnosing or treating diseases associated with undesired cell migration, invasion, proliferation, or angiogenesis, e.g. cancer, atherosclerosis. ```
The invention relates to an isolated tropomyosin (Tpm)-related
antiangiogenic receptor polypeptide or peptide, which is a is a fragment
of a full-length native Tpm protein expressed on the surface of
endothelial cells, or a variant of the fragment. It has a molecular mass
of about 17 kDa and corresponds in its sequence to, or is a variant of,
an internal fragment of a native Tpm isoform which is a binding site for
antiangiogenic polypeptide agents; The isolated antiangiogenic receptor
polypeptide, peptide or variant has substantially the same biochemical
activity of binding to the antiangiogenic polypeptide agent that
classification to the isolated polypeptide or peptide is human histidine-proline
crich glycoprotein (HPRG), rabbit HPRG, a Tpm-binding, antiangiogenic
human kininogen (HK), the D5 domain of HK, or a Tpm-binding,
antiangiogenic homologue, variant, domain or fragment of the HK or its D5
domain. The Tpm-related antiangiogenic receptor polypeptide or peptide,
antiangiogenic compositions are useful for inhibiting endothelial cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        migration, invasion, proliferation or angiogenesis, for inducing endothelial cell apoptosis, or for treating tumours or cancer, diabetic retinopathy, neovascular glaucoma, uveitis, endometriosis, arthritis, psoriasis, or scleroderma. The antibody may be also used for detecting the presence of a Tpm polypeptide or peptide in a biological sample, for promoting wound healing, or for treating diseases or conditions in which increased angiogenesis is desired, e.g. coronary artery disease or peripheral artery disease. The present sequence represents a human HPRG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New tropomyosin-related antiangiogenic receptor polypeptide, useful for inhibiting endothelial cell migration, invasion, proliferation or angiogenesis, inducing endothelial cell apoptosis, or treating tumors or cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Tpm; tropomyosin; antiangiogenic receptor; histidine-proline rich glycoprotein; HPRG; cytostatic; antidiabetic ophthalmological; antiinflammatory; gynaecological; antiarthritic; antipsoriatic; dermatological; cardiant; vasotropic; vulnerary; angiogenesis; gene therapy; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mazar AP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is the protein sequence of human histidine proline rich glycoprotein (HPRG), a proteinaceous metal chelator that can be used to inhibit angiogensis and treat cancer. Claimed anti-angiogenic polypeptides or peptides comprise: the histidine-proline-rich (H/P) domain (see ABB79806) of human HPRG; an H/P domain of rabbit HPRG (see ABB79807); a variant of these that is capable of inhibiting angiogenesis, endothelial cell proliferation or endothelial tube formation in vitro or in vivo; or a pentapeptide having the generic sequence given in ABB79808. Also claimed are: chemically synthesised or recombinantly produced peptide multimers; a diagnostically or therapeutically labeled anti-

congigating purpoposition, resping the diagnostically labeled polypeptide, peptide multimer and a carrier; an antibody specific for an epitope of HPRG that is present in the H/P demain of specific for an epitope of HPRG that is present in the H/P demain of a way which inhibits the anti-angiogenic activity of HPRG or the domain of a way which inhibits the anti-angiogenic activity of HPRG or the domain.

CC and martigen-binding fragment of the antibody; a method for inhibiting cor an antigen-binding fragment of the antibody; a method of inhibiting diagonesis, a method for treating a subject having a disease or induction associated with undesired claim a subject and in associated with undesired claimistation, invasion, colding apoptosis; a method of etherting the presence of HPRG or proliferation, or angiogenesis; a method of etherting the presence of HPRG or its cleavage product or proliferation, invasion, solated nucleic acids encoding the polypeptide, peptide or peptide multimer; an expression vector; transformed or transferred cells; a method of providing to a cell, tissue or organ an angiogenesis-inhibitory amount of HPRG, an H/P domain of HPRG or its pentapeptide, or the peptide multimer; an affinity ligand useful for binding molecule, comprising the polypeptide, peptide or peptide multimer, immobilised to a solid support or cartier; and a method of isolating HPRG-binding molecule, or isolating or cells expressing the binding molecule, or receptor, from a complex mixture. The compositions and methods are useful in diagnosing or treating alsease or condition associated with undesired cell migration, invasion, proliferation, or angiogenesis, such as cancer, archritis, peptic ulcers, or fracturers. HPRG is especially useful; in inhibiting the growth of primary tumours or metastases, and manded encared in treating neurodegenesis and are useful for promoting metastion in pertinent disease states, and in various in pertinent disease states, and in various in pertinent disease states, and in various
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                469

The invention relates to an isolated tropomyosin (Tpm)-related
antiangiogenic receptor polypeptide or peptide, which is a is a fragment
cof a full-length native Tpm protein expressed on the surface of endothelial cells, or a variant of the fragment. It has a molecular mass
cof about 17 kDa and corresponds in its sequence to, or is a variant of, an internal fragment of a native Tpm isolated antiangiogenic peotypeptide agents; The isolated antiangiogenic receptor
colypeptide, peptide or variant has substantially the same biochemical
cativity of binding to the antiangiogenic polypeptide agent that
contive Tpm internal fragment. The antiangiogenic polypeptide agent that
contive Tpm internal fragment. The antiangiogenic polypeptide agent that
contive Tpm internal fragment of reagment of binds to the isolated polypeptide or peptide, a Tpm-binding, antiangiogenic
contine to the isolated polypeptide or peptide, a Tpm-binding, antiangiogenic
contine to the isolated polypeptide or peptide, a Tpm-binding,
contine to the DS domain of HK, or a Tpm-binding,
contine The Tpm-related antiangiogenic receptor polypeptide or peptide,
contine Tpm-related antiangiogenic receptor polypeptide or peptide,
contine the Tpm-related antiangiogenic receptor polypeptide or peptide,
contine The Tpm-related antiangiogenic receptor polypeptide or peptide,
contine thy invasion, proliferation or angiogenesis, or conterting
contentalial cell apoptosis, or for treating tumours or cancer, diabetic
contenpathy, neovascular glaucoma, uveitis, endometriosis, arthritis,
contensed angiogenesis is desired, e.g. coronary artery disease or
content despetator of a properiode or peripheral sample, for
coronary arter
                                                                                                                                                                                                                                                                                                                                                                                                                           New tropomyosin-related antiangiogenic receptor polypeptide, useful for inhibiting endothelial cell migration, invasion, proliferation or angiogenesis, inducing endothelial cell apoptosis, or treating tumors or cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      350 HPHKHHSHEQHPHGHHPHAHHPHEHDTHRQHPHGHHPHGHHPHGHHPHGHHPHGH

62; 41pp; English Claim 1; SEQ ID NO The invention relates to a composition comprising several cDNAs that are differentially expressed in a liver disorder. The composition is useful for treating liver disorder such as hyperlipidaemia, hypertension, type II diabetes, tumours of the liver and disorders of the inflammatory and immune response. The composition is useful for a high-throughput method of screening several molecules or compounds to identify a ligand which specifically binds a cDNA. A protein encoded by the cDNA is useful for a high-throughput method for using a protein to screen several molecules or compounds to identify at least one ligand which specifically binds the protein which involves combining the protein encoded by the cDNA with several of molecules or compounds under conditions to allow specific binding, and detecting specific binding between the protein and a molecule or compound, therefore identifying a ligand which specifically binds the protein. The composition is useful for detecting and between the protein and a molecule or compound. t 0 molecule or compound, therefore identifying a ligand which specifically binds the protein. The composition is useful for detecting and quantifying differential gene expression, can be used in gene therapy, to formulate prognosis and to design a treatment regimen and to monitor the efficacy of treatment. The present sequence represents the amino acid sequence of a protein encoded by a cDNA differentially expressed in a liver disorder.

The invention relates to a combination comprising cDNAs that are differentially expressed in response to steroid treatment. Also included are the following: a high throughput method for using a cDNA to detect differential expression of nucleic acids in a sample; and a high throughput method of screening molecules or compounds to identify a ligand that specifically binds a cDNA. The sample is from a subject with wilson disease. The high throughput method of screening molecules or compounds to identify a ligand that specifically binds a cDNA comprises: combining the combination with molecules or compounds under conditions to allow specific binding; and detecting specific binding between each cDNA and at least one molecule or compound. The molecules or compounds are regulatory proteins. The combination is useful for preparing a composition for treating liver disorders associated with steroid therapy, e.g., cirrhosis or hepatitis. The present sequence represents a human protein which is differentially expressed in steroid-induced C3A liver cells. Note: The specification but was obtained in electronic format directly from USPTO at sequence.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 409
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          469

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is the protein sequence of rabbit histidine proline rich glycoprotein (HPRG), a proteinaceous chelator that can be used to inhibit angiogenesis and treat cancer. Claimed anti-angiogenic polypeptides or peptides comprise: the histidine-proline-rich (H/P) domain (see ABB79806) of human HPRG; an H/P domain of rabbit HPRG (see ABB79807); a variant of these that is capable of inhibiting angiogenesis, endothelial cell proliferation or endothelial tube formation in vitro or in vivo; or a pentapeptide having the generic sequence given in ABB79808. Also claimed are: chemically synthesised or recombinantly produced peptide multimers; a diagnostically or therapeutically labeled anti-angiogenic polypeptide, peptide or peptide or peptide multimer; a diagnostically angiogenic polypeptide, peptide or peptide multimer; an antibody specific for an epitope of HPRG that is present in the H/P domain of polypeptide, peptide or peptide multimer and a carrier; an antibody specific for an epitope of HPRG that is present in the H/P domain or any which inhibits the anti-angiogenic activity of HPRG or the domain, or an antigen-binding fragment of the antibody; a method for inhibiting coldition associated with undesired cell migration, invasion, proliferation, or angiogenesis; a method of stimulating or inhibiting angiogenesis in a subject; a method of stimulating or inhibiting angiogenesis in a subject and a sandiogenesis; a method of stimulating or inhibiting angiogenesis in a subject in a biological sample; isolated nucleic acids encoding the polypeptide, peptide or peptide multimer; an expression vector; transformed or transfected cells; a method of expression peptide multimer; and expression vector; transformed or transfected cells; a method of encoding cells; and condition associated with undesired cell migratical cells; and the cells; and cells; and cells; and cells and cells; and cells and cells and cells; and cells and cells and cells and cells; and cells and cells and cells and cells.
                                                                                                                                                                                                                                                                                                 Histidine proline rich glycoprotein; HPRG; rabbit; antiangiogenic; cytostatic; antiarteriosclerotic; antiinflammatory; antidiabetic; gynaecological; antiarthritic; antiulcer; osteopathic; antitumour; ophthalmological; nootropic; neuroprotective; antiparkinsonian; chelator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ine rich glycoprotein (HPRG) polypeptide, useful for
ting diseases associated with undesired cell migration,
ation, or angiogenesis, e.g. cancer, atherosclerosis.

providing to a cell, tissue or organ an angiogenesis-inhibitory amount of HPRG, an H/P domain of HPRG or its pentapeptide, or the peptide multimer; an affinity ligand useful for binding to, or isolating, an HPRG-binding consecule or cells expressing the binding molecule, comprising the polypeptide, peptide or peptide multimer, immobilised to a solid support or carrier; and a method of isolating HPRG-binding molecule, or isolating or enriching cells expressing HPRG-binding site or receptor, from a complex mixture. The compositions and methods are useful in diagnosing or treating a disease or condition associated with undesired cell migration, atherosclerosis, diabetic retinopathy, inflammation, endometriosis, atherosclerosis, diabetic retinopathy, inflammation, endometriosis, arthritis, peptic ulcers, or fractures. HPRG is especially useful in inhibiting the growth of primary tumours or metastases, and may also be used in treating neurodegenerative diseases like Alzheimer's disease, Parkinson's disease and amyotrophic lateral sclerosis. The antibodies are stimulators of angiogenesis and are useful for promoting in various

The invention relates to an isolated tropomyosin (Tpm)-related
antianglogenic receptor polypeptide or peptide, which is a is a fragment
of a full-length native Tpm protein expressed on the surface of
endothelial cells, or a variant of the fragment. It has a molecular mass
of about 17 kDa and corresponds in its sequence to, or is a variant of,
an internal fragment of a native Tpm isoform which is a binding site for
antianglogenic polypeptide agents; The isolated antianglogenic receptor
polypeptide, peptide or variant has substantially the same biochemical
activity of binding to the antianglogenic polypeptide agent that
continue Tpm internal fragment. The antianglogenic polypeptide agent that
continue to the isolated polypeptide or peptide is human histidine-proline
continue to the isolated polypeptide or peptide is human histidine-proline
continue to the isolated polypeptide or peptide is antianglogenic
continue kininogen (HRK), the D5 domain of HK, or a Tpm-binding,

The invention provides thrombospondin (TSP)-binding molecules and fragments comprising regions of the TSP-1 binding domains of Histidine-CC fragments comprising regions of the TSP-1 binding domains of Histidine-CC Rich Glycoproteins (HRGP). The proteins are used for the regulation of earlier growth and proliferation, such as in the accretion of new blood vessels (angiogenesis), particularly for treatment of cardiovascular crample in embryogenesis, and in a wide range of disorders and diseases, including those involving tumours, malignancies, neoplastic and other pathological conditions and homeostatic imbalances in the control of growth and development, in particular anal cancer, bladder cancer, small ccell lung cancer, bradnessrooms (CC breast cancer, non-small cell lung cancer, bradnessrooms (DES), colorectal cancer, endometrial cancer, cesophageal cancer, cancer, cof the eye, eyelid, Kaposi 's sarcoma, kidney cancer, cancer, lymphoma, melanoma, mesothelioma, oral cancer, ovarian cancer, pancreatic cancer, cesticular cancer, skin cancer, ovarian cancer, paromach cancer, thyroid cancer, hepatoma, neuroendocrine cancer, testicular cancer, thyroid cancer, nepatoma, neuroendocrine cancer, testicular cancer and a cholangiocarcinoma. The present sequence represents the TSP-binding motif of HRGP Thrombospondin-binding molecules and fragments comprising regions of the TSP-1 binding domains of Histidine-Rich Glycoproteins, useful for treating cancers and cardiovascular diseases.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    à
                                                                                                                                                                                                                                         The invention relates to an isolated tropomyosin (Tpm)-related antiangiogenic receptor polypeptide or peptide, which is a is a fragment of a full-length native Tpm protein expressed on the surface of endothelial cells, or a variant of the fragment. It has a molecular mass of about 17 kDa and corresponds in its sequence to, or is a variant of, an internal fragment of a native Tpm isoform which is a binding site for antiangiogenic polypeptide agents; The isolated antiangiogenic receptor polypeptide, peptide or variant has substantially the same biochemical activity of binding to the antiangiogenic polypeptide agent that corrivity of binding to the antiangiogenic polypeptide agent that binds to the isolated polypeptide or peptide is human histidine-proline rich glycoprotein (HPRG), rabbit HPRG, a Tpm-binding, antiangiogenic homologue, variant, domain of HK, or a Tpm-binding, the D5 domain of HK, or a Tpm-binding, the MC or its D5 domain. The Tpm-related antiangiogenic for inducing are useful for inhibiting endothelial cell apoptosis, or for treating tumours or cancer, diabetic retinopathy, neovascular glaucoma, uveitis, endometriosis, arthritis, psoriasis, or scleroderma. The antibody may be also used for detecting the presence of a Tpm polypeptide or peptide in a biological sample, for increased angiogenesis is desired, e.g. coronary artery disease or conditions in which increased angiogenesis is desired, e.g. coronary artery disease to protein His-Pro (H/P) rich domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    69

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of supplement. (II) and its binding partners are useful for treating disorders of supplement. (II) and its binding partners are useful in medical imaging of polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 НРНКИНЅНЕОНРНСНИРИАНИРИЕНОТИКОНРИСНИРИСНИРИСНИРИСН---ИР
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ..

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed cativity of (II) or to treat disease states involving (II). (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and to produce other types of data and products dependent on DNA and cain acid sequences. AbG00010-AbG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           рининкионринунингрирснинкининининтssvocecop 317

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed cactivity of (II) or to treat disease states involving (II). (II) is useful in gene therapy techniques to restore normal cactivity of (II) or to treat disease states involving (II). (II) as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations capporting social sequences of data and products dependent on DNA and and to produce other types of data and products dependent on DNA and canno acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 DFQDYGPCDPPPHNQGHCCHGHGPPPGHLRRRGPGKGPRPFHCRQIGSVYRLPPLRKGEV

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of supplement. (II) and states are useful for treating disorders of supplement of polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in the printed pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  50 НИРИGНИРИСНОРОДУСРСОРРРИNДСИССИСНСЯРРЕНТЯВЯСРСКОРВРЕНСЯОТСЯУ 109

Sequence 64, Application US/09976594

| Sequence 64, Application US/09976594
| Patent No. 6673549
| GENERAL INFORMATION:
| APPLICANT: Furness, Michael
| APPLICANT: Buchbinder, Jenny
| TITLE OF INVENTION: GENES EXPRESSED IN C3A LIVER CELL CULTURES TREATED WITH STEROIDS
| FILE REFERENCE: PA-0041 US
| CURRENT APPLICATION NUMBER: US/09/976,594
| CURRENT FILING DATE: 2000-10-12
| PRIOR APPLICATION NUMBER: 60/240,409
| PRIOR PILING DATE: 2000-10-12
| NUMBER OF SEQ ID NOS: 1143
| SOFTWARE: PERL PROGram
| SEQ ID NO 64
| LENGTH: 525
| TYPE: PRT
| ORGANISM: Homo sapiens
| FATURE:
| NAME/KEY: misc feature
| OTHER INFORMATION: Incyte ID No. 6673549 085596CD1
| US-09-976-594-64

; Sequence 62, Application US/09919039
; Patent No. 6727066
; GENERAL INFORMATION:
; APPLICANT: Kaser, Matthew R.
; TITLE OF INVENTION: GENES EXPRESSED IN TREATED HUMAN C3A LIVER CELL CULTURES
; FILE REFERENCE: PA-0035 US
; FILE REFERENCE: PA-0015 US
; CURRENT APPLICATION NUMBER: US/09/919,039

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    469
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9

Application US/08785636
; Sequence 1. Application US/08785636
; Patent No. 6027942
; GENERAL INFORMATION:
; APPLICANT: Yip, Tai-Tung
; APPLICANT: Hutchens, T. William
; TITLE OF INVENTION: Method and Apparatus for Desorption and Ionization of
; TITLE OF INVENTION: Analytes
; FILE REFERENCE: Hutchens
; CURRENT APPLICATION NUMBER: US/08/785,636
; CURRENT FILING DATE: 1997-01-17
; EARLIER APPLICATION NUMBER: 08/068,896
; SOFTWARE: PatentIN Ver. 2.0

Sequence 8369, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REFERENCE: CL001307

CURRENT PILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/241,768

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FASTESEQ for Windows Version 4.0
                                                                                                                                                                                                    APPLICANT: Marc J. Rubenfield et al.

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.136

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 25291

LENGTH: 218
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     12;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ω

A;Residues: Cermment: Although its physiological function is not yet known, HRG does bind heme, dyet din, and the lysine-binding site of plasminogen. On the basis of its homology with HMW A;Residues: Cermment: The amino half of this protein is homologous to the first two cystatin-like dc ould not have inhibitory activity.
C;Comment: The amino half of this protein is homologous to the first cho cystatin-like dc content in addition to having a high histidine and proline content, this protein has necession.

e-rich' region.

L. FUNCTION: The physiological function is not yet known. It binds heme, dyes and divalent metal ions. It can inhibit rosette formation and is known to interact with heparin, thrombospondin, and the lysine-binding site of plasminogen. On the basis of its homology with HMW kininogen, the His-rich region of this protein may mediate the contact activation phase of intrinsic blood coagulation cascade.

C. -- SUBCELLULAR LOCATION: Secreted.

C. -- SUBCELLULAR LOCATION: Expressed by the liver and secreted in plasma.

C. -- LISSUE SPECIFICITY: Expressed by the liver and secreted in plasma.

-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Expressed by the liver and secreted in plasma.
-!- DOMAIN: In addition to having a high His and Pro content, this protein has many internal repeats. 15 tandem repetitions of a 5-
residue sequence (G[H/P][H/P]PH, consensus) form a His/Pro-rich

Biochemistry 35:1925-1934(1996).
-!- FUNCTION: The physiological function is not yet known. It binds
heme, dyes and divalent metal ions. It can inhibit rosette
formation and is known to interact with heparin, thrombospondin,
and the lysine-binding site of plasminogen. On the basis of its
homology with HMW kininogen, the His-rich region of this protein
may mediate the contact activation phase of intrinsic blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      EMBL; U32189; AAC48516.1; -.

It can inhibit rosette heme, dyes and divalent metal ions. It can inhibit rosette heme, dyes and divalent metal ions. It can inhibit rosette formation and is known to interact with heparin, thrombospondin, and the lysine-binding site of plasminogen. On the basis of its homology with HMW kininogen, the His-rich region of this protein may mediate the contact activation phase of intrinsic blood coagulation cascade.

CC coagulation cascade.

CC coagulation cascade.

CC -!- SUBCELLULAR LOCATION: Secreted.

CC -!- TISSUE SPECIFICITY: Expressed by the liver and secreted in plasma.

CC -!- DOMAIN: In addition to having a high His and Pro content, this protein has many internal repeats. 12 tandem repetitions of a 5-

Tesidue sequence (GHHPH, consensus) form a histidine-rich region.

CC -!- SIMILARITY: Contains 2 cystatin-like domains.

M DIRECT protein sequencing; Glycoprotein: Henarin-bindin-

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

New tropomyosin-related antiangiogenic receptor polypeptide, useful for inhibiting endothelial cell migration, invasion, proliferation or angiogenesis, inducing endothelial cell apoptosis, or treating tumors or cancer

Claim 6; SEQ ID NO 24; 117pp; English.

The invention relates to an isolated tropomyosin (Tpm) -related antiangiogenic receptor polypeptide or peptide, which is a is a fragment of a full-length native Tpm protein expressed on the surface of endothelial cells, or a variant of the fragment. It has a molecular mass of about 17 kDa and corresponds in its sequence to, or is a variant of, an internal fragment of a native Tpm isoform which is a binding site for antiangiogenic polypeptide agents; The isolated antiangiogenic receptor polypeptide or variant has substantially the same biochemical activity of binding to the antiangiogenic polypeptide agents, as does the

us-10-074-225a-6.rag

```
binds to the isolated polypeptide or peptide is human histidine-proline

binds to the isolated polypeptide or peptide is human histidine-proline

crich glycoprotein (HPRG), rabbit HPRG, a Tpm-binding, antiangiogenic

homologue, variant, domain of human or rabbit HPRG, two chain

chuman kininogen (HK), the D5 domain of HK, or a Tpm-binding,

antiangiogenic homologue, variant, domain or fragment of the HK or its D5

domain. The Tpm-related antiangiogenic receptor polypeptide or peptide,

antibodies and compositions are useful for inhibiting endothelial cell

migration, invasion, proliferation or angiogenesis, for inducing

endothelial cell apoptosis, or for treating tumours or cancer, diabetic

retinopathy, neovascular glaucoma, uveitis, endometriosis, arthritis,

psoriasis, or scleroderma. The antibody may be also used for detecting

the presence of a Tpm polypeptide or peptide in a biological sample, for

promoting wound healing, or for treating diseases or conditions in which

increased angiogenesis is desired, e.g. coronary artery disease or

protein His-Pro (H/P) rich domain.
                                                                                                                                                                                                                                                                                                                                              ö

The present sequence is the protein sequence of rabbit histidine proline rich divoporatein (HPRG), a proteinaceous chelator that can be used to inhibit angiogenesis and treat cancer. Claimed anti-angiogenesis and treat cancer. Claimed anti-bibiting angiogenesis.

CC domain (see ABR99800) of human HPRG; and HP domain of trabbit HPRG of the seek that the following the generic sequence given in ABR99809. As a diagnostically or therapeutically produced anti-angiogenic polypeptide, peptide having the generic sequence given in ABR99808. Deptide multimers and a carrier; an antibody septide or peptide multimer and a carrier; an antibody peptide, peptide or peptide multimer and a carrier; an antibody peptide, peptide or peptide multimer and a carrier; an antibody peptide, peptide or peptide multimer and a carrier; an antibody peptide, peptide or peptide multimer and a carrier; an antibody companied, peptide or peptide multimer and a carrier; an antibody peptide, peptide or peptide multimer of the antibody; a method for inhibiting can an antigen-binding fragment of the antibody; a method for inhibiting an appleasis a method for treating a subject having a disease or condition associated with undesired cell migration, invasion, or an antigen-binding fragment of the antibody; a method for inhibiting angogenesis a method of effecting the presence of HPRG or the peptide or peptide or peptide multimer; an application associated with undesired cell migration, invasion, and angiogenesis and expectited multimer; and angiogenesis and angiogenesis and angiogenesis and may also be complex mixture. The compositions and embrods are useful in disease. Complex mixture. The compositions and methods are useful in disease, disbetic vertacting a disease or condition associated with undesired cell migration in pertinent disease states, and in veatuble or peptide multi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               380

```
The invention relates to an isolated tropomyosin (Tpm)-related antiangiogenic receptor polypeptide or peptide, which is a is a fragment of a full-length native Tpm protein expressed on the surface of endothelial cells, or a variant of the fragment. It has a molecular mass of about 17 kDa and corresponds in its sequence to, or is a variant of, an internal fragment of a native Tpm isolated antiangiogenic receptor polypeptide agents, The isolated antiangiogenic receptor polypeptide or variant has substantially the same biochemical activity of binding to the antiangiogenic polypeptide agents, as does the activity of binding to the antiangiogenic polypeptide agent that contains to the isolated polypeptide or peptide is buman histidine-proline rich glycoprotein (HPRG), rabbit HPRG, a Tpm-binding, antiangiogenic homologue, variant, domain or fragment of human or rabbit HPRG, two chain the Tpm-related antiangiogenic receptor polypeptide or peptide, antibodies and compositions are useful for inhibiting endothelial cell ampiration, invasion, proliferation or angiogenesis, for inducing migration, invasion, proliferation or angiogenesis, for inducing conductions in veitis, endometriosis, arthritis, psoriasis, or scleroderma. The antibody may be also used for detecting the presence of a Tpm Polypeptide or peptide in a biological sample, for permipheral artery disease or conditions in which increased angiogenesis is desired, e.g. coronary artery disease or peripheral artery disease. The present sequence represents a rabbit HPRG process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New tropomyosin-related antiangiogenic receptor polypeptide, useful for inhibiting endothelial cell migration, invasion, proliferation or angiogenesis, inducing endothelial cell apoptosis, or treating tumors or

The present sequence is the protein sequence of human histidine proline rich glycoprotein (HPRG), a proteinaceous metal chelator that can be used to inhibit angiogensis and treat cancer. Claimed anti-angiogenic polypeptides comprise: the histidine-proline-rich (H/P) domain (see ABB79806) of human HPRG; an H/P domain of rabbit HPRG (see ABB79807); a variant of these that is capable of inhibiting angiogenesis, endothelial cell proliferation or endothelial tube formation in vitro or in vivo; or a pentapeptide having the generic sequence given in ABB79808. Also claimed are: chemically synthesised or recombinantly produced peptide multimers; a diagnostically or therapeutically labeled anti-angiogenic polypeptide, peptide or peptide multimer; a diagnostically useful HPRG-related composition, comprising the diagnostically labeled by peptide, peptide or peptide multimer and a carrier; an antibody specific for an epitope of HPRG that is present in the H/P domain of human or rabbit HPRG, and which binds to HPRG or to any of the domains in a way which inhibits the anti-angiogenic activity of HPRG or the domain, or an antigen-binding fragment of the antibody; a method for inhibiting cell migration, cell proliferation or angiogenesis, or for inducing apoptosis; a method for treating a subject having a disease or condition associated with undesired cell migration, invasion, cell proliferation, or angiogenesis; a method of stimulating or inhibiting angiogenesis in a subject; a method of detecting the presence of HPRG or its cleavage product or its peptide in a biological sample; isolated
                                                                                                                                                                                                                                                                                                Histidine proline rich glycoprotein; HPRG; human; antiangiogenic; cytostatic; antiarteriosclerotic; antiinflammatory; antidiabetic; gynaecological; antiarthritic; antiulcer; osteopathic; antitumour; ophthalmological; nootropic; neuroprotective; antiparkinsonian; chelator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New histidine-proline rich glycoprotein (HPRG) polypeptide, useful for diagnosing or treating diseases associated with undesired cell migration, invasion, proliferation, or angiogenesis, e.g. cancer, atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /note= "Histidine-proline-rich domain, region also specifically claimed in Claim 1"

```
expression vector; transformed or transfected cells; a method of expression vector; transformed or transfected cells; a method of providing to a cell, tissue or organ an angiogenesis inhibitory amount of HPRG, an H/P domain of HPRG or its pentapeptide, or the peptide multimer; an affinity ligand useful for binding to, or isolating, an HPRG-binding molecule or cells expressing the binding molecule, comprising the polypeptide, peptide or peptide multimer, immobilised to a solid support or carrier; and a method of isolating HPRG-binding molecule, or isolating or enriching cells expressing HPRG-binding site or receptor, from a complex mixture. The compositions and methods are useful in diagnosing or treating a disease or condition associated with undesired cell migration, invasion, proliferation, or angiogenesis, such as cancer, atherosclerosis, diabetic retinopathy, inflammation, endometriosis, atherosclerosis, diabetic retinopathy, inflammation, endometriosis, inhibiting the growth of primary tumours or metastases, and may also be used in treating neurodegenerative diseases like Alzheimer's disease, and amyotrophic lateral sclerosis. The antibodies are stimulators of angiogenesis and are useful for promoting in various

The invention relates to a composition comprising several cDNAs that are differentially expressed in a liver disorder. The composition is useful for treating liver disorder such as hyperlipidaemia, hypertension, type II diabetes, tumours of the liver and disorders of the inflammatory and immune response. The composition is useful for a high-throughput method of screening several molecules or compounds to identify a ligand which specifically binds a cDNA. A protein encoded by the cDNA is useful for a specifically binds a cDNA. A protein encoded by the cDNA is useful for a high-throughput method for using a protein concern several molecules or compounds to identify at least one ligand which specifically binds the protein which involves combining the protein encoded by the cDNA with several of molecules or compounds under conditions to allow specific binding, and detecting specific binding between the protein and a molecule or compound, therefore identifying a ligand which specifically condition is useful for detecting and encoded by a cDNA differentially expressed in a sequence of a protein encoded by a cDNA differentially expressed in a sequence of a protein encoded by a cDNA differentially expressed in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8

The invention relates to an isolated tropomyosin (Tpm)-related antiangiogenic receptor polypeptide or peptide, which is a is a fragment of a full-length native Tpm protein expressed on the surface of endothelial cells, or a variant of the fragment. It has a molecular mass of about 17 kDa and corresponds in its sequence to, or is a variant of, an internal fragment of a native Tpm isoform which is a binding site for antiangiogenic polypeptide agents; The isolated antiangiogenic receptor polypeptide, peptide or variant has substantially the same biochemical activity of binding to the antiangiogenic polypeptide agents, as does the native Tpm internal fragment. The antiangiogenic polypeptide agent that binds to the isolated polypeptide or peptide is human histidine-proline crich glycoprotein (HPRG), rabbit HPRG, a Tpm-binding, antiangiogenic polypeptide or peptide or rich glycoprotein (HPRG), rabbit HPRG, or a Tpm-binding, antiangiogenic human kininogen (HK), the D5 domain of HK, or a Tpm-binding, to natiangiogenic homologue, variant, domain of fragment of the HK or its D5 domain. The Tpm-related antiangiogenic receptor polypeptide or peptide, antiangiogenic antiangiogenic antiangiogenic receptor polypeptide or peptide, antiangiogenic nongositions are useful for inhibiting endothelial cell mostations are useful for inhibiting endothelial cell mostations are useful for inhibiting endothelial cell mostations are useful for inhibiting wound healing, or for treating tumours or cancer, diabetic retinopathy, neovascular glaucoma, uveitis, endometriosis, arthritis, psoriasis, or scleroderma. The antibody may be also used for detecting the presence of a Tpm polypeptide or peptide in a biological sample, for increased angiogenesis is desired, e.g. coronary artery disease. The present sequence represents a human HPRG protein sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           329

The invention relates to a combination comprising cDNAs that are
differentially expressed in response to steroid treatment. Also included
are the following: a high throughput method for using a cDNA to detect
differential expression of nucleic acids in a sample; and a high
throughput method of screening molecules or compounds to identify a
ligand that specifically binds a cDNA. The sample is from a subject with
Wilson disease and comparison of a standard defines a stage of that
disease. The high throughput method of screening molecules or compounds
to identify a ligand that specifically binds a cDNA comprises: combining
the combination with molecules or compounds under conditions to allow
specific binding; and detecting specific binding between each cDNA and at
least one molecule or compound. The molecules or compounds are regulatory
proteins. The combination is useful for preparing a composition for
treating liver disorders associated with steroid therapy, e.g., cirrhosis
or hepatitis. The present sequence represents a human protein which is
differentially expressed in steroid-induced C3A liver cells. Note: The
sequence data for this patent did not form part of the printed
specification but was obtained in electronic format directly from USPTO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                275 КРРFКРHGSRDHHHPHKP----НЕНGPPPPDERDHSHGPPLPQGPPPLLPMSCSSCQH 329

ine rich glycoprotein (HPRG) polypeptide, useful for ting diseases associated with undesired cell migration, attion, or angiogenesis, e.g. cancer, atherosclerosis. diagnosing or trea invasion, prolifer New histidine-prol

82pp; English. Claim 1; Page 13;

The present sequence is the protein sequence of the histidine-prolinecrich (HPP) domain of rabbit anti-angiogenic histidine proline rich
glycoprotein (HPRG, see also ABB79805). Claimed anti-angiogenic
colypebtides or peptides comprise: the H/P domain (see ABB79806) of human
colypebtides or peptides comprise: the H/P domain (see ABB79806) of human
colypebtides or peptides comprise: the H/P domain (see ABB79806) of human
cc thinbiting angiogenesis, endothelial cell proliferation or endothelial
cube formation in vitro or in vivo; or a pentapeptide having the generic
cube formation in ABB79800. Also claimed are: chemically synthesised or
recombinantly produced peptide multimers; a diagnostically labeled anti-angiogenic polypeptide to repetide or peptide
cc carrier; an antibody specific for an epitope of HPRG that is present in
the diagnostically labeled anti-angiogenic polypeptide or peptide or peptide
cc multimer; an antibody specific for an epitope of HPRG that is present in
the H/P domains in a way which inhibits the anti-angiogenic activity of
the H/P domains in a way which inhibits the anti-angiogenic activity of
c the H/P domains in a mantigen-binding fragment of the antibody; a
method for inhibiting call migration, call invasion, cell invasion, or angiogenesis; a method of
c migration, invasion, proliferation, or angiogenesis; a method of
c migration, invasion, proliferation, or angiogenesis; a method of
c migration, invasion, proliferation, or angiogenesis; a method of
c peptide multimer; an expression vector; transformed or
c transfected cells; a method of providing to a cell, tissue or organ an
expected cells; a method of providing to a cell, tissue or organ an
expected, cells; an enthod of providing to a cell, tissue or organ and
congressing HPRG-binding molecule, or solating, an HPRG-binding molecule or cells expressing
c moliferations and methods are useful in diagnosing or treating a disease
c composition as an angiogenesis, such as cancer, atherosclerosis, diabetic numation, endometriosis, arthritis, peptic ulcers, or especially useful in inhibiting the growth of primary uses, and may also be used in treating neurodegenerative leimer's or Parkinson's disease. The antibodies are loggenesis and are useful for promoting in pertinent disease states, and in various stimulators of ang neovascularization fractures. HPRG is proliferation, or retinopathy, infla immunoassays or tumours

New histidine-proline rich glycoprotein (HPRG) polypeptide, useful for diagnosing or treating diseases associated with undesired cell migration, invasion, proliferation, or angiogenesis, e.g. cancer, atherosclerosis.

English Claim 1; Page 13; 82pp; The present sequence is the protein sequence of the histidine-prolinecrich (H/P) domain of human anti-angiogenic histidine proline rich
glycoprotein (HPRG, see also ABB79804). Claimed anti-angiogenic
glycoprotein (HPRG, see also ABB79804). Claimed anti-angiogenic
comparing of reabbit HPRG (see ABB12345); a variant of human HPRG; an H/P
commain of rabbit HPRG (see ABB12345); a variant of these that is capable
cof inhibiting angiogenesis, endothelial cell proliferation or endothelial
cube formation in vitro or in vivo; or a pentapeptide having the generic
sequence given in ABB79808. Also claimed are: chemically synthesised or
recombinantly produced peptide multimers; a diagnostically labeled anti-angiogenic polypeptide, peptide or peptide
cric multimer; a diagnostically useful HPRG-related composition, comprising
the diagnostically labeled polypeptide, peptide or peptide multimer and
carrier; an antibody specific for an epitope of HPRG that is present in
the H/P domain of human or rabbit HPRG, and which binds to HPRG or to any
cof the domains in a way which inhibits the anti-angiogenic activity of
the HPRG or the domain, or an antigen-binding fragment of the antibody; a
method for inhibiting cell migration, cell invasion, cell proliferation
or angiogenesis, a method for treating a
method for inhibiting angiogenesis in a subject; a method of
stimulating or inhibiting angiogenesis in a subject; a method of
stimulating or inhibiting or its cleavage product or its peptide in

The invention relates to an isolated tropomyosin (Tpm)-related antiangiogenic receptor polypeptide or peptide, which is a is a fragment of a full-length native Tpm protein expressed on the surface of anotherlial cells, or a variant of the fragment. It has a molecular mass of about 17 kDa and corresponds in its sequence to, or is a variant of, an internal fragment of a native Tpm isoform which is a binding site for antiangiogenic polypeptide agents; The isolated antiangiogenic receptor polypeptide, peptide or variant has substantially the same biochemical activity of binding to the antiangiogenic polypeptide agent that binds to the isolated polypeptide or peptide is human histidine-proline rich glycoprotein (HPRG), rabbit HPRG, a Tpm-binding, antiangiogenic homologue, variant, domain of fragment of human or rabbit HPRG, two chain human kininogen (HK), the D5 domain of HK, or a Tpm-binding, the D5 domain. The Tpm-related antiangiogenic receptor polypeptide or peptide, antiangiogenic homologue, variant, domain or fragment of the HK or its D5 antiangiogenic homologue, variant, domain or fragment of the high HPRG, two chain migration, invasion, proliferation or angiogenesis, for inducing endothelial cell apoptosis, or for treating tumours or cancer, diabetic retinopathy, neovascular glaucoma, uvetifs, endometriosis, arthritis, psoriasis, or scleroderma. The antibody may be also used for detecting the presence of a Tpm polypeptide or peptide in a biological sample, for promoting wound healing, or for treating diseases or conditions in which increased angiogenesis is desired, eg. coronary artery disease or peripheral artery disease. The present sequence represents a human HPRG protein His-Pro (H/P) rich domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           7
